

Security and Savings in One Automated Solution

NEW!
VERSION
6.3

Prism Patch Manager™ secures your network by eliminating software vulnerabilities that viruses, worms and other malware exploit. And it automates the increasingly complex process of patch management so your IT staff is more efficient and productive.

New features in Prism Patch Manager 6.3:

- NEW** **Cross-platform Support** – Prism Patch Manager is now the perfect solution for mixed computing environments with full support for Red Hat Linux and Solaris operating systems.
- NEW** **Patch Rollback** – Easily roll back single or multiple patches to a previous configuration.
- NEW** **Foreign Language Support** – In addition to English, French, German, Spanish and Italian operating system versions, Prism Patch Manager now supports Swedish and Chinese language OS versions as well.
- NEW** **IP Range and Subnet Scanning** – Quickly target which Windows and Unix systems get patched based on IP range, subnet and other network configuration settings.
- NEW** **Reboot Notification** – Automatically notify users of pending reboot following background patch installation.
- **Patch Metadatabase**—Comprehensive information about how to deploy, validate and install new patches is stored in Prism Patch Manager's metadatabase. A team of experts research and test new patches, making them ready for installation within hours.
- **Remote and Disconnected System Report**—Prism Patch Manager does the whole job, patching remote and disconnected systems as soon as they connect to the network.
- **Central Deployment**—Use Prism Patch Manager to roll out patches across your organization in one easy step. Deployment happens when you want it to, without wasting bandwidth or interrupting users.
- **Automated Patching**—Prism Patch Manager turns a time-consuming task into an automated process so you can do the job in hours instead of days.

Prism Patch Manager 6.3 benefits:

- **Comprehensive Patch Support**—Prism Patch Manager supports patching Windows, Red Hat Linux and Solaris operating systems as well as applications like Internet Explorer, SQL Server, IIS, Exchange Server, Microsoft Office, MDAC and more.
- **Patch Notification**—Don't waste valuable time trying to track down new patches. Prism Patch Manager notifies you when new patches are available – and automatically locates and downloads them for you.
- **Complete System Assessment**—Prism Patch Manager evaluates your systems to identify vulnerabilities so you'll always know which patches to install and which are missing. Our thorough pre-deployment testing means you get the most reliable patch management available.
- **Dependency and Prerequisite Knowledge**—Prism Patch Manager eliminates worries about patch conflicts, dependencies and prerequisites and ensures reliable patch installation. Its comprehensive metadatabase gives Prism Patch Manager all the information it needs to install the right patches the right way.
- **Robust Reporting**—Prism Patch Manager gives you full insight into the state of the patches on your network. Reporting features let you generate and view reports on compliance status and trending.
- **Compliance Maintenance**—Prism Patch Manager helps you patch computers to the compliance baseline that you define for improved process control and standardization across the network.

Eliminate software vulnerabilities across your entire network. Automatically.

Can you keep up?

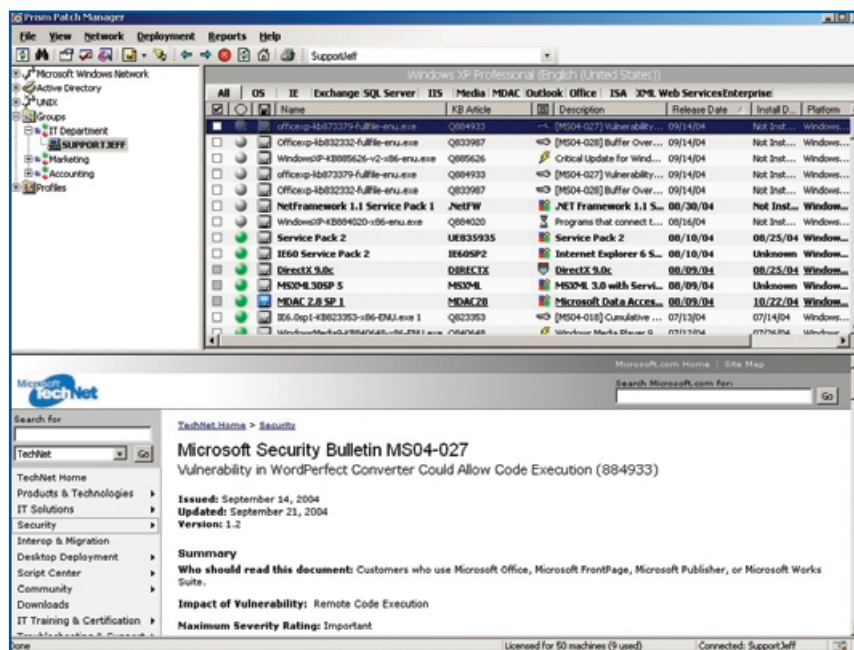

Securing your network is a mission-critical job. But keeping up with the steadily increasing number of patches takes time and money – two things that are always in short supply. You need an easy-to-use and affordable solution that automates and streamlines the patch management process. An intelligent agent that locates, downloads and installs the patches that keep your software updated – quickly, easily and reliably. A documented process that ensures

consistent and comprehensive network security.

An automated process that keeps your valuable IT staff resources productive.

Backed with a metadatabase of patches supported by a full time staff of engineers who research and test patches as new security threats emerge.

You need **Prism Patch Manager™ 6.3**

The Prism Patch Manager console provides a central location for assessment, administration and reporting.
