

**The power to get things done right.
Easier. Faster. The first time.**

Deploy to every local, mobile and remote PC or Windows® server across your entire organization—via LAN, WAN, e-mail or the web.

New and exclusive features in PRISM DEPLOY®:

- **Ready for Windows Vista™** – Prism Deploy is designed to work effortlessly with Windows Vista, making it the perfect configuration management solution for mixed Windows environments.
- **Faster Windows Vista™ Deployment** – Using state-of-the-art packaging and deployment technologies, Prism Deploy can install software on Windows Vista™ systems up to five times faster than native installations.
- **PRISM EXCLUSIVE Prism Console**– Prism Deploy is now administered through the new Prism Console and delivers all the console's features, including customized views, simplified client installation and changing polling intervals. *A Prism Deploy exclusive feature.*
- **PRISM EXCLUSIVE Smart Update™** – Make a configuration rule once, then let Prism Deploy automatically group and target your systems for dynamic software deployment, updating, repair or removal. Eliminate the need for repeated, time-consuming inventory scans with a set-and-forget process that continuously checks computer states and automatically performs the compliance tasks that you specify. *A Prism Deploy exclusive feature.*
- **PRISM EXCLUSIVE Permissions Packaging**– Achieve better deployment reliability by graphically distributing security settings along with applications. Prism Deploy captures, packages and deploys applications that require changes to special registry and NTFS permissions for controlled, reliable, automated rollouts. *A Prism Deploy exclusive feature.*
- **PRISM EXCLUSIVE Package Authentication**– Make rollouts more secure by applying a digital signature to a package so clients only install authorized software. Ensure that only the administrators who are authorized can view and edit packages, making your entire deployment system safe. *A Prism Deploy exclusive feature.*
- **Dynamic Reporting**– Prism Deploy leverages a dynamic reporting engine and the Prism Console so you create reports the way you want them. Add, remove, resize and rearrange columns in any Prism Console view, and immediately create a report directly from that customized view.
- **Task Organization**– Improve management efficiency with the ability to organize administrative tasks into groups and categories. The extensive list of individual tasks is a thing of the past.
- **Task Assignments**– New Prism Deploy view panes in the Prism Console allow much easier task assignment. Simply drag and drop tasks onto individual computers or groups, and easily view all the assignments for selected computers.
- **Security Roles**– Specify pre-defined roles for administrators and customize permissions of roles to completely secure deployment or updating processes.
- **SQL Database Architecture**– Prism Deploy is built on a SQL database for improved scalability and integration with industry-standard technologies. Integrate Prism Deploy with an existing SQL database, or let Prism Deploy help you install the Microsoft SQL Desktop Engine (MSDE).
- **Checkpoint Restart**– Keep your deployments going while making the most efficient use of network bandwidth and local disk space. Unlike other solutions, Prism Deploy incrementally delivers and installs deployment packages, so it can resume distributions where they were interrupted without having to redeliver the entire deployment package.

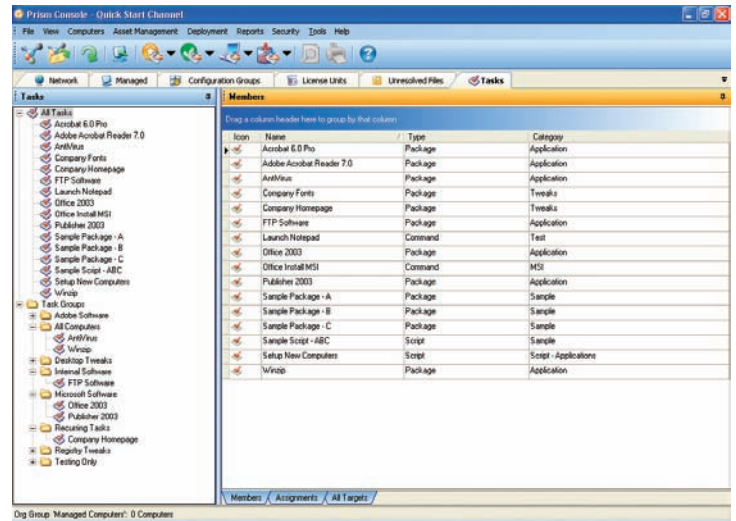

Software deployment as it should be.

Automated software deployment – and beyond. Prism Deploy

Software deployment is an occasional project, but software management is an ongoing process that supports strategic initiatives like operational improvement, data security, and regulatory compliance. Getting the right software to the right machine quickly and easily isn't enough anymore. You need a solution that helps you manage desktops and servers from the time they're provisioned until they're retired. A solution that automates desktop management and simplifies the most complex processes. A solution that automatically remediates unauthorized configuration changes to ensure network security and integrity. A solution that's easy to learn, easy to use and easy to implement. So you eliminate hidden training and consulting costs.

You need **Prism Deploy®**.

The Prism Console is easily customized to support your established management and reporting processes.
